

Husaria Alert Notification System (HANS) is a Health Technology as a Service encompassing a unified emergency call, messaging, and communications solution.

HANS provides hardwired call points such as pull cords, as well as wireless Bluetooth-enabled pendants/watches for flexibility. HANS outputs its messaging and alerts through display screens and text messaging to Android phones/app.

Our in-room concierge service is handled with a video tablet, allowing video calls with care staff, entertainment and event information push, as well as other customized integration options.

The HANS webpage provides a detailed look into all your connected hardware; device connection status, uptime, battery life (for wireless devices). Create custom notifications for special events, such as a low battery alert for resident pendants.

Client	Device MAC	Label	Location	Gateway MAC	Battery Life	Device Uptime	Last Check-in	Status
